

Disaster Recovery Cloud Storage

CLOUD STORAGE

In the event of hardware failure at your local offices, is your data safe? It's not a question of "if" but "when." Everyone knows it's going to happen sooner or later. And when your system fails, it may not be a disaster for anyone else, but it can certainly be a disaster for you! Backup plans should never be an afterthought for your organization. Period.

Today you can become less reliant on (and at the mercy of) your local physical hardware by taking proactive steps to protect yourself from system failover. Through the use of Cloud Storage, when the unimaginable actually does happen at your office, your data is safe.

WebDrive

Now, you can add another hard drive to your office computers without adding more hardware. With WebDrive, you can add another drive that "appears" on your computers, but is actually on Allison Royce's cloud storage servers. When you copy your files to that drive, it "feels just like" it is on your own local systems, but the files are actually being copied off site, out to the cloud, up to the WebDrive.

With WebDrive, you have total local control of what you back up and how often you back it up. And, you can receive notifications that your backup has been successful!

Allison Royce can also further back up your WebDrive to yet another secondary location, giving you the additional peace of mind that your valuable files are protected and safe. Allison Royce of South Texas and San Antonio supports Windows®, Linux and Macintosh®.

Managed Data Protection & Recovery

Some organizations may require an even greater level of data safety, and peace of mind. Managed Backup Services take the day-to-day backup processes (and responsibilities) from your designated onsite personnel, and place these tasks into the hands of highly skilled data backup professionals.

Managed Onsite Backup — Does your company have someone on site managing the backup of your precious data? Allison Royce manages your backup so that it's running correctly, locally, on site, at your business.

Managed Offsite Backup — Allison Royce's Managed Backup experts continuously monitor your systems to ensure successful backups are completed off site as scheduled. The safety and security of your data is never in question, with multi-site redundancy, complete status notifications, and around-the-clock oversight by Allison Royce data backup professionals.

WebDrive Solution

With WebDrive, you can add another drive that "appears" on your computers, but is actually on Allison Royce's cloud storage servers.
